

Motor Controllers DMPUC, DIN-Rail Motor Protection Unit

DMPUC

- Controlling motor operation
- Motor thermal protection
- Phase sequence, phase loss, unbalance, locked rotor, stall, earth fault and earth leakage protection
- Alarm set-points adjustable by the user
- TRMS measurements of distorted sine waves (voltages/currents)
- 3-phase current range up to 2000A with external current transformers or pass-through 5A
- 3-phase voltage range up to 690V
- Electrical variables monitoring
- Monitoring of operating hours, down time, number of starts
- Communication port, included in the main module
- Modular motor management system
- DIN-rail mounting (expansion module mounted side by side from main module)
- Additional I/O expansion modules
- Easy connections management and installation
- Power Supply: 24 VDC
- Event datastamping
- Variable datalogging

Type _____

Product Description

DMPU is a modular electronic motor protection relay that provides protection, monitoring and metering functions for 3-phase, constant or dual speed, AC induction motors. The modular housing is for DIN-rail mounting with IP20 protection degree.

The device, in its basic configuration, is able to measure the electrical motor variables (current, voltage, harmonic distortion, etc), to

control the thermal image of the motor, and also its load, operational status (start-stop, star-delta starting, 2 speeds, alarm set-point and other functions adjustable by the user), motor temperature and includes an event data-logger.

The current measurement is carried out by means of 3 external current transformers, or by pass-through holes up to 5 A.

Being provided with a serial

communication module, it is possible to gather all the relevant instantaneous values and transmit them to a host control system for data collection and process control. Profibus and Modbus TCP protocols are available for a high connectivity to the most used fieldbus systems. Through the optional remote display (for panel mounting) it is possible to see the instantaneous values and

status and also to modify the set-points and the values of other parameters. The whole programming of the unit is to be performed via configuration software. Additional optional modules allow the collection of additional PTC and PT100 values for coils and bearing temperature control, and additional input/outputs are used for some local on-board logic functions.

Type Selection

DMPUC-PRB	Main module + Profibus.	DMPUC-65	Currents and voltages module.
DMPUC-MBT	Main module + Modbus TCP/IP.	DMPUC-R2	I/O module.
DMPUC-05	Currents and voltages module (pass-through holes).	DMPUC-EL	Earth leakage current module

DMPUC-MBT and DMPUC-PRB

- Main module for DMPUC
- Communication port for Profibus (DMPUC-PRB) or Modbus TCP (DMPUC-MBT)
- Auxiliary dual RS485 communication port (Modbus) to display or PC
- RJ 11 connection to measurement module
- Internal bus connecting additional modules
- 3 PTC or PT100 or digital inputs
- Data logging and event data stamping
- 24 VDC ±20% power supply input
- Dimensions: 2-DIN module
- Protection degree: IP20

LED Specification DMPUC-MBT and DMPUC-PRB

LED			
Type	Dual color	Green flashing	Power supply ok, configuration error.
Status and color	Green fixed	Red fixed	Communication error, internal bus.

Input Specification DMPUC-MBT and DMPUC-PRB

Digital inputs		Temperature	
Number of input	Max 3, (no common reference), including the already used thermal inputs.	Number of input	Max 3, including the already used thermal inputs.
Working modes	Each input can be configured as a switch or as a toggle.	Temperature probe	PT100 or PTC (programmable via DMPU-PS software).
Switch	When the input is activated the value is ON; when the input is deactivated the value is OFF.	Number of wires	2-wire connection
Toggle	Each time the input goes from de-activate to activate the value changes state.	Range	-50° to +850°
Activation mode	Each input is programmable to be considered active when the contact is closed or when it is open when used as a switch, while only at pressure when used as a button.	Resolution	1°C/F
Type	Contact resistance or NPN.	Accuracy	±(0.5% FS)
Contact reading voltage	3.3VDC	PTC (3 in series)	According to EN 60947-7-8
Contact reading current	Max. 0.45mA	PTC	Setpoint 3.1 kΩ, release 1.65 kΩ, Detecting short-circuits (<0.02 kΩ) and wire breaking (>10kΩ).
Contact resistance	≤ 1kΩ, closed contact; ≥ 20kΩ, open contact.	Temperature drift	<150 ppm/°C at 850°C FS
NPN	V _{ON} <1V, V _{OFF} > 2V.	Engineering unit	Selectable °C or °F by software (the same in all the temperature inputs).
Acquisition time	≤ 200ms.	Insulation	See the table "Insulation between inputs and outputs".
Insulation	See the table "Insulation between inputs and outputs".		

Communication Specification

RS485 port			
Type	Bidirectional (static and dynamic variables and parameters).	Connection	1 x RJ45 socket on the top side.
Functions	Configuring the device, modifying set-point parameter, digital virtual input and monitoring the measured variables by DMPU-PS software.	IP configuration	Fixed IP address (no DHCP), subnet mask, default gateway, port (selectable by DMPU-PS software).
Connection	1 x RJ11 socket on the bottom side (on the right) or 2-wires (to reduce the noise use a shielded cable and connect the shield to GND terminal and to the ground, in only one point).	Protocol	Modbus TCP/IP.
Address	1, selectable by DMPU-PS software.	Factory-defined values	IP address "192.168.1.2", subnet mask "255.255.255.0", default gateway "192.168.1.1", port "502".
Protocol	Modbus RTU.	Insulation	See the table "Insulation between inputs and outputs".
Factory-defined data format	Data bits "8", parity "none", stop bit "1".		
Baud-rate	Default: 9.6k. Selectable by software: 9.6k, 19.2k, 38.4k, 115.2k.		
Insulation	See the table "insulation between inputs and outputs".		
Note	During the connection by software (through RJ11 connector) the DMPU-HMI display must be disabled (see the display instruction to enable this mode).		
Ethernet port (DMPUC-MBT)			
Type	Bidirectional (static and dynamic variables and parameters).	Function	Digital virtual input and monitoring the measured variables by supervision system.
Functions	Configuring the device, modifying set-point parameter, digital virtual input and monitoring the measured variables by DMPU-PS software or supervision system.	Connections	1 x DB-9 socket on the top side.
		Address	2-126, selectable by DMPU-PS.
		Protocol	Profibus DP-V1.
		Factory-defined address	126
		Baud-rate	9.6k, 19.2k, 45.45k, 93.75k, 187.5k, 500k, 1.5M, 3M, 6M, 12M. Auto baud rate identification.
		Telegram	Max. 255 characters.
		Physical layer	RS485
		Insulation	See the table "insulation between inputs and outputs".

Power Supply Specification

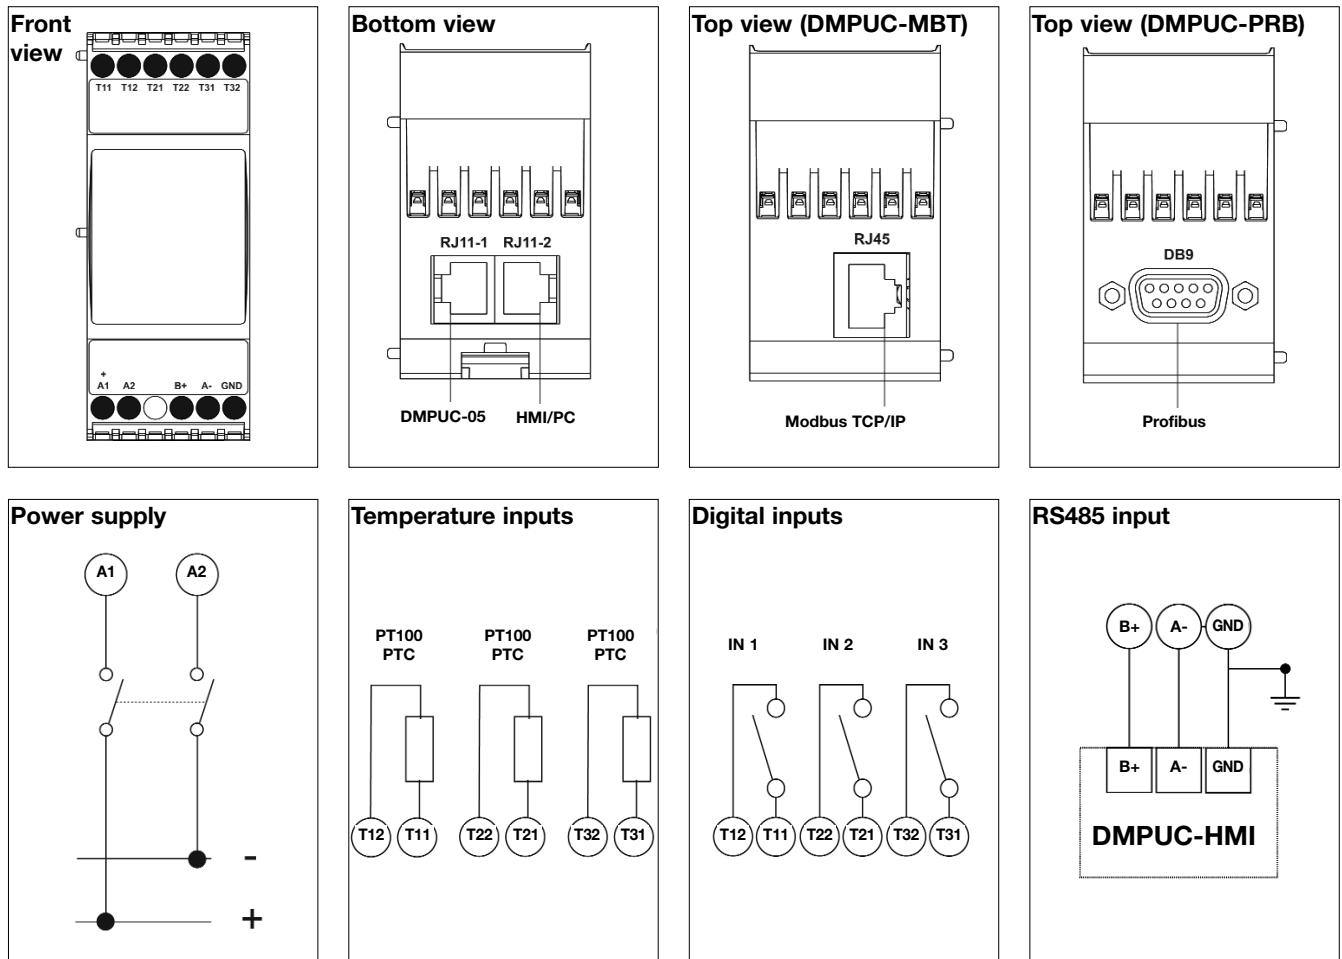

DMPUC-MBT and DMPUC-PRB

Power supply	24VDC ± 20% from screw terminals.
Power consumption	2W; startup peak current <1.8A.
Suggested power supply	SPM3241

Modules Configuration

Minimal configuration	1 main module (DMPUC-MBT or DMPUC-PRB). 1 measurement module (DMPUC-05 or DMPUC-65).	DMPUC-MBT and DMPUC-PRB Power supply connections Input connection Communication connection RS485 Modbus TCP/IP Profibus Measurement module connection Screw tightening torque	Screw-type, 2 x 1.5 mm ² terminal blocks. Screw-type, 6 x 1.5 mm ² terminal blocks for 3 x P100/PTC (2 wires) or 3 digital inputs. One port with two twins terminals: 1 x RJ11 (on the right of the bottom side) for PC connection and screw type 3x1.5 mm ² Terminal box for DMPUC-HMI display connection. 1 x RJ45 (DMPUC-MBT) 1 x DB-9 (DMPUC-PRB) 1 x RJ11 0.4 Nm / 0.8 Nm (min./max.).
Maximum configuration With DMPUC-EL	1 main module (DMPUC-MBT or DMPUC-PRB). 1 measurement module (DMPUC-05 or DMPUC-65). 9 I/O modules (DMPUC-R2). 1 earth leakage current module (DMPUC-EL).		
Without DMPUC-EL	1 main module (DMPUC-MBT or DMPUC-PRB). 1 measurement module (DMPUC-05 or DMPUC-65). 10 I/O modules (DMPUC-R2).		

Wiring Diagrams DMPUC-MBT and DMPUC-PRB

DMPUC-05 and DMPUC-65

- Measures 3-phase current, 3-phase voltage with neutral
- RJ 11 connection to main module
- Pass-through version up to 5A or 65A
- 2 relay outputs
- Split core housing for 5A version
- Dimensions: 3-DIN module
- Protection degree: IP20

Input Specification DMPUC-05 and DMPUC-65

Measurement system	3-phases (with or without neutral). Aron connection: only with DMPUC-05 and proper wiring.	Power factor	$\pm[0.002+1.5\%(1.000 - "PF RDG")]$
Working frequency	45 to 65 Hz	Reactive power	$\pm(2\% \text{ FS})$
Current inputs	TRMS measurement of distorted waves. The sampling frequency is automatically calculated.	Reactive power resolution	1% FS
Connection type (DMPUC-05)	3-phase split-core pass-through.	Harmonic distortion	$\pm 1\% \text{ FS} (\text{FS}=100\%)$
(DMPUC-65)	3-phase pass-through	Active Energy	Class1
Current range (DMPUC-05)	100mA - 6A	Reactive Energy	Class2
(DMPUC-65)	600mA - 65A	Leakage current	$\pm(1\% \text{ FS})$
Hole size (DMPUC-05)	9 mm	Leakage current resolution	1mA
(DMPUC-65)	12 mm	Temperature drift	$\leq 200\text{ppm}/^\circ\text{C}$
Max selectable primary current	CT programmable from 1 to 9999.	Sampling rate	3200 samples/s @ 50Hz; 3840 samples/s @ 60Hz.
Harmonic distortion	THD, up to 32 nd harmonic.	Measurements refresh time	100ms
Voltage inputs		Measurements Method	TRMS
Voltage range	3-phase, 100 to 690 VLL ($\pm 15\%$).	Digital filter	0 to 99.9% of the input electrical scale
Max selectable voltage ratio	VT programmable from 1 to 9999.	Filter operating range	Filtering coefficient 1 to 255
Neutral connection	Available	Filtering coefficient	Display, alarm, analogue and serial outputs (all the variables).
Harmonic distortion	THD, up to 32 nd harmonic.	Filter action	
Accuracy	Relevant to control function, serial communication data (@25°C $\pm 5^\circ\text{C}$, R.H. @60%, 48 to 62 Hz).	Crest factor	≤ 3
Current	$\pm(0.5\% \text{ FS})$	Current overload	
Current resolution	0.2% FS	Continuos	DMPUC-05 DMPUC-65
Phase-neutral voltage	$\pm(0.5\% \text{ FS})$	For 20s	6A 65A
Phase-phase voltage	1% FS	DMPUC-05 DMPUC-65	40A (accuracy 5%) 400A (accuracy 5%)
Voltage resolution	0.1% FS	For 500ms (DMPUC-05) For 10ms (DMPUC-65)	200A Max @50Hz 1950A Max @50Hz
Frequency	$\pm 0.1\text{Hz}$ (45 to 65Hz)	Voltage overload	
Active power	$\pm(1\% \text{ FS})$	Continuos	1.2 Un
Active power resolution	0.5% FS	For 500ms	2 Un
		Input impedance	$> 1\text{M}\Omega$

Wiring Diagrams DMPUC-EL

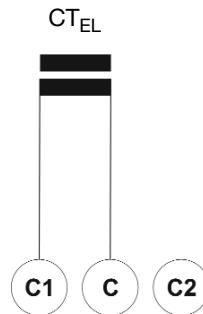

The wiring diagram for core balance transformer depends on the earth leakage current setpoint (I_{SEL}) and the transformer ratio (R_{CTEL}); calculate the P value according to the following formula to define when to use the wiring diagram ($P < 694$) or ($P \geq 694$).

$$P = \frac{I_{SEL}}{R_{CTEL}} \times 5 \times 10^5$$

Functions Description (cont.)

Block management	Each variable defined as "Block" in the table "Variable List" is associated with a monitoring variable function. This function defines the ON or OFF block status. Each block can be connected to each other if the function depends on other block status. The function parameters are set through the DPMU-PS software configuration. Up to 32 blocks defined as "Block status" are available.	ANSI64 ANSI66 _{SH} ANSI66 _{MTBS} ANSI66 _{MTFLS} ANSI64EL	Measures the vector sum of the three phase current (neutral isn't present). The sum is earth fault current. Monitors that the number of starts during the last set time period is lower than max starts set point. Monitors the time since previous start. Monitors the time since previous stop. Monitors if the earth leakage current is above the set-point during a set-point time.
Monitoring functions			
Input			
Digital input	Monitors the contact or PTC status. Each input is programmable to be considered active when the contact is closed or when it is open when used as a switch, while only at pressure when used as a button.	ANSI48	Prevents the locked rotor condition at motor start by monitoring the current.
Temperature input	Monitors the PT100 temperature. It is based on two set-point. 4 different configuration with under /over level (with hysteresis) or in/out window (without hysteresis) are available.	ANSI51LR	Prevents the locked rotor condition during motor running by monitoring the current.
Istantaneous variables	Monitors the selected instantaneous variable. It is based on two set-point. 4 different function configuration with under /over level (with hysteresis) or in/out window (without hysteresis) are available.	ANSI37	Monitors if any of the phase currents measured is below the set-point current during a set point time.
ANSI functions			
ANSI49	Allows to protect the motor against damage due to thermal effects which take place in overload conditions, starting from current measurement. The protection function trips when motor heating, i.e. the heat quantity in the motor, (represented by the TCU parameter - Thermal Capacity Used) reaches 100% of the maximum one for that specific motor.	ANSI27S ANSI47 ANSI27D Counters/timers	Monitors if any of the phase - phase voltages is too low during the set time. Monitors if any of the phase - phase voltage is too high during a set-point time. Monitors if the phase sequence is L1-L2-L3 or L1-L3-L2. Monitors if at least one phase - phase voltage drops below the 70% of mains voltage. Based on one set-point (in seconds with the timer, in counts with the counter). This function depends on other blocks status. Connect two blocks to start/increase the timer/counter and reset it.
ANSI46	Monitors inverse current which is one of the main causes of motor heating.	Internal counter	It is based on one set- point. The block status is activated when the internal counter goes above the set-point.
ANSI50	Monitors if any of the phase currents measured is too high.	Output Relay output	This function depends on other blocks status. Connect one or more blocks to open / close the relay (the output is activated when at least one of the selected block status is activated). NE or ND programmable.

Functions Description (cont.)

Latch reset	Internal output to reset all the active block status which have been set for latching. Each variable defined as "variable list" could be set for latching.	Variable monitoring	The software allows to monitor in real time the variables value or/and the used blocks status of the listed variables in the "Variable list" table (see the "Monitor" columns).
Logic functions	This function depends on other blocks status (up to 6). This block status depends on the state of up to 6 other blocks. This dependence is set through elementary logic functions (OR, AND and NOT).	Label	A label (defined by user) could be associated at each variable defined as "label" in the table "variable list".

Data Logger Functions

Data base logging

Available variables	See table "Variable List". Up to 20.
Max number of variables	Max 9999 data with date/hour reference based on FIFO storage.
Memory capacity	Average values on time windows.
Variable type	Programmable, from 60s to 3600s.
Time window	

Fast data logger

Available variables	See table "Variable List". Up to 20
Max number of variables	Max 9999 data with progressive number based on STACK storage.
Memory capacity	Instantaneous values from the start event.
Variable type	Fixed, 100 ms.
Time window	

Data event logging

Available variables	See table "Dataevent variable list"; each listed variable can be enabled or disabled for data-event storing.
Memory capacity	Max 9999 data with date/hour reference based on FIFO storage.
Trigger	By event.
Event timing resolution	<1s (if more than one event take place in 1s they are registered but the correct sequence isn't guaranteed).

Data Event Variable List

Variables	Description
START	Start up Motor
RUN/STOP	Run/Stop Motor
ERR _{CONF}	Module configuration Error
RST _{DB}	Data base logging reset
RST _{FS}	Fast data logger reset
RST _{EV}	Data event logging reset
RST	Reset command (latch)
PW _{ON}	Power OFF
PW _{OFF}	Power ON
IN ₁ to IN ₂₃	Digital input (23 available)
OUT ₁ to OUT ₂₂	Relay outputs (22 available)
BLK ₁ to BLK ₃₂	Used blocks status (32 available)

Variable List

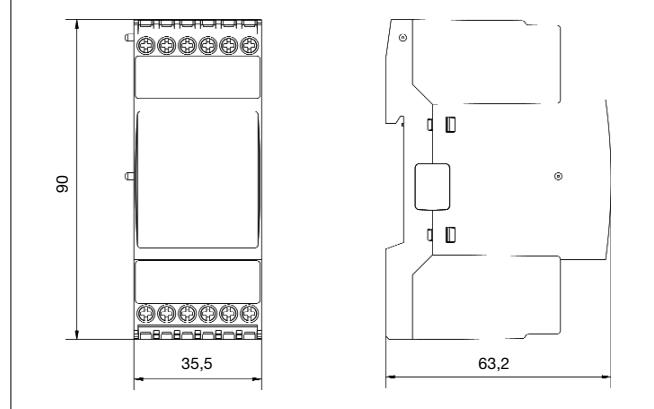

Variables	Block	Block status	Latch function	Label	Data logger functions	Monitor		Description
						Value	Block status	
Inputs								
IN ₁ to IN ₂₃	✓	✓	✓	✓	✓	✓	✓	Digital input (up to 23 available)
TIN ₁ to TIN ₂₃	✓	✓	✓	✓	✓	✓	✓	Temperature input (up to 23 available)
VIN ₁ to VIN ₉	✓	✓	✓	✓	✓	✓	✓	Virtual digital input (up to 9 available)
Instantaneous variable								
V _{1-N}	✓	✓	✓	✓	✓	✓	✓	L1-N voltage
V _{2-N}	✓	✓	✓	✓	✓	✓	✓	L2-N voltage
V _{3-N}	✓	✓	✓	✓	✓	✓	✓	L3-N voltage
V _{L-N} Σ	✓	✓	✓	✓	✓	✓	✓	Average value of phase-neutral voltages
V ₁₋₂	✓	✓	✓	✓	✓	✓	✓	L1-L2 voltage
V ₂₋₃	✓	✓	✓	✓	✓	✓	✓	L2-L3 voltage
V ₃₋₁	✓	✓	✓	✓	✓	✓	✓	L3-L1 voltage
V _{L-L} Σ	✓	✓	✓	✓	✓	✓	✓	Average value of phase-phase voltages
I ₁	✓	✓	✓	✓	✓	✓	✓	Phase 1 current
I ₂	✓	✓	✓	✓	✓	✓	✓	Phase 2 current
I ₃	✓	✓	✓	✓	✓	✓	✓	Phase 3 current
I _{Earth}	✓	✓	✓	✓	✓	✓	✓	Calculated neutral current
W ₁	✓	✓	✓	✓	✓	✓	✓	Phase 1 active power
W ₂	✓	✓	✓	✓	✓	✓	✓	Phase 2 active power
W ₃	✓	✓	✓	✓	✓	✓	✓	Phase 3 active power
W _{TOT}	✓	✓	✓	✓	✓	✓	✓	Total active power
VA ₁	✓	✓	✓	✓	✓	✓	✓	Phase 1 apparent power
VA ₂	✓	✓	✓	✓	✓	✓	✓	Phase 2 apparent power
VA ₃	✓	✓	✓	✓	✓	✓	✓	Phase 3 apparent power
VA _{TOT}	✓	✓	✓	✓	✓	✓	✓	Total apparent power
VAR ₁	✓	✓	✓	✓	✓	✓	✓	Phase 1 reactive power
VAR ₂	✓	✓	✓	✓	✓	✓	✓	Phase 2 reactive power
VAR ₃	✓	✓	✓	✓	✓	✓	✓	Phase 3 reactive power
VAR _{TOT}	✓	✓	✓	✓	✓	✓	✓	Total reactive power
PF ₁	✓	✓	✓	✓	✓	✓	✓	Phase 1 power factor
PF ₂	✓	✓	✓	✓	✓	✓	✓	Phase 2 power factor
PF ₃	✓	✓	✓	✓	✓	✓	✓	Phase 3 power factor
PF _{TOT}	✓	✓	✓	✓	✓	✓	✓	Total power factor
HZ	✓	✓	✓	✓	✓	✓	✓	Frequency
AsyV _{L-N}	✓	✓	✓	✓	✓	✓	✓	Asymmetry L-N%
AsyV _{L-L}	✓	✓	✓	✓	✓	✓	✓	Asymmetry L-L%
PSQ	✓	✓	✓	✓	✓	✓	✓	Phase sequence
I _{IMB}	✓	✓	✓	✓	✓	✓	✓	Current Imbalance
I ₊	✓	✓	✓	✓	✓	✓	✓	Positive Sequence Component of Motor Current
I ₋	✓	✓	✓	✓	✓	✓	✓	Negative Sequence Component of Motor Current
THD V _{1-N}	✓	✓	✓	✓	✓	✓	✓	Total harmonic distortion of V _{1-N}
THD V _{2-N}	✓	✓	✓	✓	✓	✓	✓	Total harmonic distortion of V _{2-N}
THD V _{3-N}	✓	✓	✓	✓	✓	✓	✓	Total harmonic distortion of V _{3-N}
THD V ₁₋₂	✓	✓	✓	✓	✓	✓	✓	Total harmonic distortion of V ₁₋₂
THD V ₂₋₃	✓	✓	✓	✓	✓	✓	✓	Total harmonic distortion of V ₂₋₃
THD V ₃₋₁	✓	✓	✓	✓	✓	✓	✓	Total harmonic distortion of V ₃₋₁

Variable List

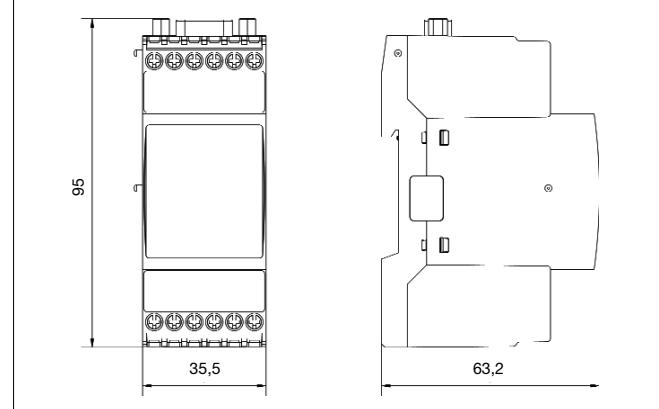

Variables	Block	Block status	Latch function	Label	Data logger functions	Monitor		Description
						Value	Block status	
THD I ₁	✓	✓	✓	✓	✓	✓	✓	Total harmonic distortion of I ₁
THD I ₂	✓	✓	✓	✓	✓	✓	✓	Total harmonic distortion of I ₂
THD I ₃	✓	✓	✓	✓	✓	✓	✓	Total harmonic distortion of I ₃
TCU	✓	✓	✓	✓	✓	✓	✓	Thermal Capacity Used [%]
ANSI functions								
ANSI 49	✓	✓	✓	✓	✓	•	✓	Thermal Image ANSI
ANSI 46	✓	✓	✓	✓	✓	•	✓	Max inverse sequence current ANSI
ANSI 50	✓	✓	✓	✓	✓	•	✓	Overcurrent ANSI
ANSI 64	✓	✓	✓	✓	✓	•	✓	Earth fault ANSI
ANSI 66 _{SH}	✓	✓	✓	✓	✓	•	✓	Starts per hours ANSI
ANSI 66 _{MTBS}	✓	✓	✓	✓	✓	•	✓	Minimum time between starts ANSI
ANSI 66 _{MTFLS}	✓	✓	✓	✓	✓	•	✓	Minimum time from last stop ANSI
ANSI 64EL	✓	✓	✓	✓	✓	•	✓	Leakage current ANSI
ANSI 48	✓	✓	✓	✓	✓	•	✓	Locked rotor at start-up ANSI
ANSI 51LR	✓	✓	✓	✓	✓	•	✓	Stalled rotor ANSI
ANSI 37	✓	✓	✓	✓	✓	•	✓	Undercurrent ANSI
ANSI 27S	✓	✓	✓	✓	✓	•	✓	Undervoltage ANSI
ANSI 59	✓	✓	✓	✓	✓	•	✓	Oversupply ANSI
ANSI 47	✓	✓	✓	✓	✓	•	✓	Phase sequence ANSI
ANSI 27D	✓	✓	✓	✓	✓	•	✓	Phase loss ANSI
Counters/timers								
CT ₁	✓	✓	✓	✓	✓	✓	✓	Counter #1
CT ₂	✓	✓	✓	✓	✓	✓	✓	Counter #2
TM ₁	✓	✓	✓	✓	✓	✓	✓	Timer #1
TM ₂	✓	✓	✓	✓	✓	✓	✓	Timer #2
Internal counter								
kWh _{TOT}	•	•	•	•	•	✓	•	Active energy [kWh]
kVArh _{TOT}	•	•	•	•	•	✓	•	Reactive energy [kVArh]
N _S	•	•	•	•	✓	•	•	Number of Starts
N _{SH}	✓	✓	✓	✓	✓	✓	✓	Starts per hour (ANSI 66)
T _{RTOT}	•	•	•	•	✓	✓	•	Total running hours
T _{RPAR}	•	•	•	•	✓	✓	•	Partial running hours
T _{BT}	✓	✓	✓	✓	✓	✓	✓	Estimated time before trip (associated with ANSI 49)
T _{BR}	✓	✓	✓	✓	✓	✓	✓	Estimated time before restart (associated with ANSI 66)
Outputs								
OUT ₁ to OUT ₂₂	✓	•	•	✓	•	•	•	Relay outputs (up to 22 available)
TLC	✓	•	•	•	•	•	•	Latch reset
Logic functions								
TT ₁ to TT ₉	✓	✓	✓	✓	✓	•	✓	6IN/1OUT Truth table (up to 9 available)

These current transformers are suggested according to the nominal and locked rotor currents; for particular needs see the other current transformer types provided by Carlo Gavazzi (eg. current transformers with different mounting or housing).

Mounting and Positioning

Connect all module (except DMPUC-05) side by side according to the order defined while configuring the device. The first module must be DMPUC-MBT or DMPUC-PRB (main module). If it's used more than one DIN-rail use the internal bus adaptor DMPUC-CC to connect the different groups of modules.

Accessories

Code	Description
DMPU-PS	DMPUC-MBT/DMPUC-PRB programming software (included with DMPU-CPC cable or downloadable from the WEB)
DMPUC-HMI	DMPUC programmable display interface
DMPU-PSHMI	DMPUC-HMI programming software (included with DMPU-PS software)
DMPUC-CC	DMPUC Adaptor to internal bus-to-RJ connector
DMPU-CPAN	DMPUC cable for panel connector
DMPU-CPC	DMPUC cable for PC connection (included with the DMPU-PS software)
