

# Dupline®/Optical Fibre Converters Types G 3492 0000 and G 3493 0000

- Converts Dupline® for transmission on optical fibre
- Runs on optical multimode fibre pairs (50/125, 62.5/125)
- ST type connector
- Up to 5 km optical transmission distance with 62.5/125 fibre
- DIN-rail mounting
- LED-indications for supply and fibre connection
- AC power supply

## Product Description

The G34930000 converts the Dupline® signal for transmission on optical multimode fibre pairs (50/125, 62.5/125). The G34930000 always operates together with a G34920000, which converts

the signal back from optical to electrical representation via a built-in channel generator output stage. Up to 5 km optical transmission distance can be achieved.

## Mode of Operation

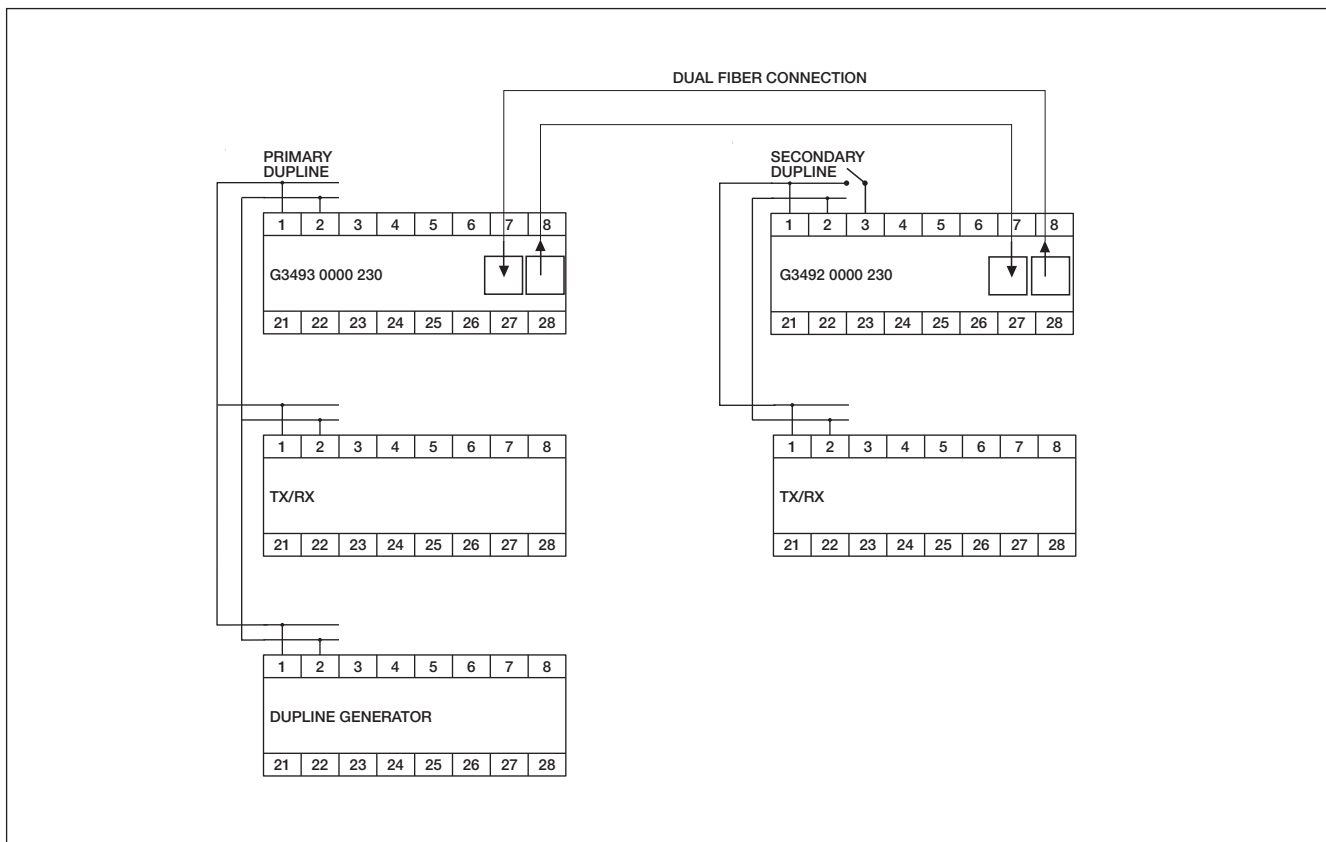

The Dupline® Optical Converters enable the use of glass fibre as transmission media on one or more sections of a Dupline® Fieldbus network. The possibility to freely combine electrical and optical media makes it easier to adapt the Dupline® Field-

bus to the system requirements. Optical Fibres can be useful when Dupline® signals have to be transmitted outdoor in geographical areas with frequent thunderstorms, or in case of sections with heavy noise induction.

The G 3493 0000 converts the Dupline® signal from electrical to optical level, while the G 3492 0000 with built-in channel generator converts the carrier signal back from optical to electrical level (secondary Dupline®). Up to 5 km distance can be achieved

on the glass fibre, which can have the dimensions 50/125 or 62.5/125. Two optical fibres are required for connecting the two Optical Converter Units.
