

# RG..D..N

## RG 1-phase solid state relays with a communications interface

Communication interface for real time monitoring only

RGC..D..N

RGS..D..N

### Benefits

- **Communications interface.** Solid state relay parameters and diagnostic data are accessible in real time.
- **Reduced maintenance costs and downtime.** Use of real-time data for prevention of machine stoppages during operation.
- **Good quality products and low scrap rates.** Real-time monitoring allows timely decisions for better machine and process management.
- **Reduced efforts in troubleshooting.** Distinguished faults to facilitate and reduce troubleshooting time.
- **Versatile.** Easy integration in existing machines as the control of the solid state relay does not change compared to a solid state relay without a communication interface.
- **Fast installation and set-up.** The solid state relays on the BUS are addressed by Auto- addressing for fast set-up and prevention of incorrect settings.
- **Compact dimensions.** Slimline RG series for a minimum product width of 17.8 mm, 1x DIN, up to 37 AAC at 40°C.

### Description

The **RG..N** solid state relays are the switching components in the NRG BUS chain.

Switching of the **RG..D..N** is controlled by a voltage in the range of 4-32 VDC applied to the specific **RG..D..N**. In addition to the typical switching function of a solid state relay, the **RG..N** has integrated monitoring and a communication interface to provide data of the monitored variables and diagnostic information in real-time. The variables that can be read out from each **RG..D..N** are current, voltage, frequency, power, energy consumption and running hours. The status of each **RG..N** is accessible and in case of an unhealthy status, the specific fault is indicated to facilitate troubleshooting.

The **RG..N** cannot interface directly with the system controller (PLC) but needs to be addressed in an **NRG BUS chain** (as explained further on). 1 **NRG BUS chain** can handle up to 48 **RG..D..Ns**. The first **RG..N** in the BUS chain is connected to the NRG controller, whilst the last **RG..N** in the BUS chain has to be terminated with a BUS terminator provided with the NRG controller.

The **RGC..N** has an integrated heatsink and output ratings go up to 660 VAC, 65 A. The **RGS..N** does not have an integrated heatsink. Maximum output ratings of the **RGS..N** go up to 660 VAC, 90 A. LEDs on the front facade give a visual indication of the status of the **RG..N** output, any ongoing communication and the alarm status of the **RG..N** and its respective load.

Specifications are noted at 25°C unless otherwise specified.

### Applications

Any heating application where reliable and precise maintenance of temperatures is crucial to the quality of the end product. Typical applications include plastic machinery such as injection machines, extrusion machines and PET blow moulding machines, packaging machinery, sterilisation machinery, drying tunnels and semiconductor manufacturing equipment.

### Main function

- 1-phase AC zero cross solid state relays up to 660 VAC, 90 AAC
- 4-32 VDC control for switching of the solid state relay
- Communications interface for real-time monitoring

## The NRG system

### System Overview

The NRG is a system consisting of one or more BUS chains that enable communication between the field devices (such as the solid state relays) and the control devices (such as the machine controller or PLC).

Each **NRG BUS** chain consists of the following 3 components:

- the NRG controller
- the NRG solid state relay(s)
- the NRG internal BUS cables

The **NRG controller** is the interface to the machine controller. It acts as the master of the BUS chain when performing specific actions on the respective BUS chain, and acts as a gateway for the communication between the PLC and the RG..N solid state relays. It is not possible to operate the NRG system without the NRG controller.

The NRG controllers available are:

- **NRGC**

The NRGC is a NRG controller with a Modbus RTU interface over RS485. The NRGC is addressed via the assigned Modbus ID (from 1-247). In a NRG system operating on Modbus it is possible to have 247 NRG BUS chains.

- **NRGC-PN**

NRGC-PN is a NRG controller with a PROFINET communication interface. The NRGC-PN is identified by a unique MAC address which is printed on the facade of the product. The GSD file can be downloaded from [www.gavazziautomation.com](http://www.gavazziautomation.com)

- **NRGC-EIP**

NRGC-EIP is a NRG controller with an EtherNet/IP communication interface. The IP address is provided automatically via a DHCP server. The EDS file can be downloaded from [www.gavazziautomation.com](http://www.gavazziautomation.com)

- **NRGC-ECAT**

NRGC-ECAT is a NRG controller with an EtherCAT communication interface. The ESI file can be downloaded from [www.gavazziautomation.com](http://www.gavazziautomation.com)

- **NRGC-MBTCP**

NRGC-MBTCP is a NRG controller with a Modbus TCP communication interface.

## System Overview - continued

The **NRG solid state relay** is the switching component in the NRG system. Each **RG..N** integrates a communication interface to exchange data with the machine controller (or PLC). The available RG..Ns that can be used in an NRG system are:

- **RG..D..N**

The RG..D..N are solid state relays for use in an NRG system having the communication interface only for real time monitoring. Control of the RG..N is done via a DC control voltage. It is possible to have maximum 48 **RG..D..Ns** in one NRG BUS chain.

- **RG..CM..N**

The RG..CM..N are solid state relays for use in an NRG system having a communication interface for control of the RG..N through the BUS and for real time monitoring. It is possible to have a maximum of 32 RG..CM..N in one NRG bus chain. There are two variants of the RG..CM..N:

**RGx1A..CM..N** - the solid state relay with zero cross switching

**RGx1P..CM..N** - the solid state relay with proportional switching.

For a review of the features available in both variants refer to the table below:

Feature	RGx1A..CM..N	RGx1P..CM..N
External control	●	-
ON / OFF switching	●	●
Burst switching	●	●
Distributed full cycle switching	●	●
Advanced full cycle switching	●	●
Phase angle	-	●
Soft start with time mode	-	●
Soft start with current limit mode	-	●
Voltage compensation	-	●
Monitoring of system parameters	●	●
SSR diagnostics	●	●
Load diagnostics	●	●
Overtemperature protection	●	●

It is not possible to mix RG..D..N and RG..CM..N in the same BUS chain.

The **NRG internal BUS cables** are proprietary cables that connect the NRG controller to the first RG..N in the NRG BUS chain and respective RG..Ns on the BUS. The internal BUS terminator, provided in the same package with the NRG controller, shall be plugged to the last RG..N in the NRG BUS chain.

## NRG system required components

Description	Component code	Notes
<b>Solid state relays</b>	RG..N	NRG solid state relays
<b>NRG controller</b>	NRGC..	<ul style="list-style-type: none"> <li>• <b>NRGC</b>: NRG controller with Modbus communication.</li> <li>• <b>NRGC-PN</b>: NRG controller with PROFINET communication.</li> <li>• <b>NRGC-EIP</b>: NRG controller with EtherNet/IP communication.</li> <li>• <b>NRGC-ECAT</b>: NRG controller with EtherCAT communication.</li> <li>• <b>NRGC-MBTCP</b>: NRG controller with Modbus TCP communication.</li> </ul> 1x RGN-TERMRES is included in the NRGC.. packaging. The RGN-TERMRES is to be mounted on the last RG..N on the bus chain.
<b>NRG internal BUS cables</b>	RCRGN-xxx	Proprietary cables terminated at both ends with a micro USB connector

# Structure

RG..D..N

\* integrated for RGC..N versions. RGS..N do not have an integrated heatsink

Element	Component	Function
1/L1	Power connection	Mains connection
2/T1	Power connection	Load connection
Ref	Voltage reference connection	Reference signal (L2 or N) for voltage measurement 2-pole plug internally shorted to allow for looping
A1, A2	Control connection	2-pole plug for control voltage
Green LED	LOAD indicator	Indicates status of RG..N output
Yellow LED	BUS indicator	Indicates ongoing communication
Red LED	ALARM indicator	Indicates presence of an alarm condition
Micro-USB	Micro-USB ports for internal BUS	Interface for RCRGN cable connection for the internal BUS communications line
Heatsink	Integrated heatsink	Integrated for RGC..N versions RGS..N versions do not have an integrated heatsink

## Features

### General data

<b>Material</b>	PA6 or PA66 (UL94 V0), RAL7035 850°C, 750°C/2s according to GWIT and GWFI requirements of EN 60335-1
<b>Mounting</b>	DIN rail (for RGC only) or panel
<b>Touch Protection</b>	IP20
<b>Overvoltage Category</b>	III, 6 kV (1.2/50 $\mu$ s) rated impulse withstand voltage
<b>Isolation</b>	Input to Output: 2500 Vrms Input and Output to heatsink: 4000 Vrms
<b>Weight</b>	RGS..50: approx. 170 g RGS..92: approx. 170 g  RGC..25: approx. 310 g RGC..32: approx. 310 g RGC..42: approx. 520 g RGC..62: approx. 1030 g
<b>Compatibility</b>	NRGC (NRG controller with Modbus RS485 interface)

## Performance

### RGS.. Output

	RGS..50..	RGS..92..
<b>Operational voltage range, Ue</b>	42 – 660 VAC	
<b>Switching mode</b>	Zero cross switching	
<b>Max. operational current: AC-51 rating<sup>1</sup></b>	50 AAC	90 AAC
<b>Operational frequency range</b>	50/60 Hz	
<b>Blocking voltage</b>	1200 Vp	
<b>Power factor</b>	> 0.9	
<b>Output overvoltage protection</b>	Integrated varistor across L1-T1	
<b>Leakage current @ rated voltage</b>	< 5 mAAC	
<b>Minimum operational current</b>	300 mAAC 1 AAC (Phase Angle)	500 mAAC 1 AAC (Phase Angle)
<b>Maximum transient surge current (I<sub>TSM</sub>), t=10 ms</b>	600 Ap	1900 Ap
<b>I<sup>2</sup>t for fusing (t=10 ms), minimum</b>	1800 A <sup>2</sup> s	18000 A <sup>2</sup> s
<b>LED indication - LOAD</b>	Green, ON when control output is ON	
<b>Critical dV/dt (@Tj init = 40°C)</b>	1000 V/ $\mu$ s	

1. Max. rated current with suitable heatsink. Refer to RGS heatsink selection tables.

## RGC.. Output

	RGC..25	RGC..32	RGC..42	RGC..62
Operational voltage range, Ue	42 - 660 VAC			
Switching mode	Zero cross switching			
Max. operational current: AC-51 rating @ 25°C <sup>2</sup>	30 AAC	30 AAC KEN 43 AAC GEN	50 AAC	75 AAC
Max. operational current: AC-51 rating @ 40°C <sup>2</sup>	25 AAC	30 AAC KEN 37 AAC GEN	43 AAC	65 AAC
Max. operational current: AC-55b rating @ 40°C <sup>3</sup>	25 AAC	30 AAC KEN 37 AAC GEN	43 AAC	65 AAC
Operational frequency range	50/60 Hz			
Blocking voltage	1200 Vp			
Power factor	> 0.9			
Output overvoltage protection	Integrated varistor across L1-T1			
Leakage current @ rated voltage	< 5 mAAC			
Minimum operational current	300 mAAC 1 AAC (Phase Angle)	500 mAAC 1 AAC (Phase Angle)		
Maximum transient surge current (I <sub>TSM</sub> ), t=10 ms	600 Ap	1900 Ap		
I <sup>2</sup> t for fusing (t=10 ms), minimum	1800 A <sup>2</sup> s	18000 A <sup>2</sup> s		
LED indication - LOAD	Green, ON when output is ON			
Critical dV/dt (@T <sub>j</sub> init = 40°C)	1000 V/μs			

2. Refer to RGC current derating curves for current ratings at different surrounding temperatures.

**Inputs**

<b>Control voltage range, Uc: A1, A2</b>	4-32 VDC
<b>Pick-up voltage</b>	3.8 VDC
<b>Drop-out voltage</b>	1 VDC
<b>Maximum reverse voltage</b>	32 VDC
<b>Maximum response time pick-up</b>	½ cycle
<b>Response time drop-out</b>	½ cycle
<b>Input current @ 40°C</b>	See diagram below

Note 1: Switching of A2 (-) is not possible, only A1 (+) can be switched.

Note 2: The output of the SSR is independent of the communications interface, therefore, the control voltage switches ON/OFF the output of the SSR even when this is not connected to the BUS chain (i.e., the RCRGN cable is not connected or a problematic BUS communication line).

**Input current vs. input voltage**

## Internal bus

<b>Supply voltage</b>	Supplied through 2 wires of the RCRGN bus cable when connected to a powered NRG controller
<b>BUS termination</b>	<b>RGN-TERMRES</b> on last device in the bus chain
<b>Max. no. of RG..Ns in a bus chain</b>	48
<b>LED indication - BUS</b>	Yellow, ON during ongoing communication
<b>ID for RG..Ns</b>	Automatic through Auto- addressing (refer to NRG User Manual for further details) Communication is only possible with RG..Ns that are addressed correctly, i.e., they have a valid ID.

## Output power dissipation

RGS..92..	220 nF / 760 V / X1	30 A
RGC..25..	220 nF / 760 V / X1	30 A
RGC..32..	330 nF / 760 V / X1	40 A
RGC..42.. , RGC..62..	330 nF / 760 V / X1 680 nF / 760 V / X1	40 A 65 A

Note:

- Control input lines must be installed together to maintain products' susceptibility to Radio Frequency interference.
- Use of AC solid state relays may, according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application.
- Performance Criteria 1 (PC1): No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2 (PC2): During the test, degradation of performance or partial loss of function is allowed. However when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3 (PC3): Temporary loss of function is allowed, provided the function can be restored by manual operation of the controls.

**Environmental specifications**

<b>Operating temperature</b>	-20 to +65 °C (-4 to +149 °F)
<b>Storage temperature</b>	-20 to +65 °C (-4 to +149 °F)

**Measurements**

Parameter	Register reference	Description
Current	CRRDR	This reports the measured load RMS current. Accuracy: +/- 10% for loads > 500mA, +/- 20% for loads between < 500mA
Hold current	CUHDR	This reports the highest RMS value of current recorded over a number of (past) cycles. The number of past cycles is addressable.
Voltage	VRRDR	RMS voltage reading (L1-Ref voltage) that is the supply voltage across the SSR + load (Ref signal connection is required) Accuracy: +/- 10%
Frequency	FQRDR	This reports the measured line frequency.
Apparent power	APRDR	This reports the apparent power that is a multiplication of the voltage RMS value and current RMS value. (Ref signal connection is required)
Real power	RPRDR	This reports the real power reading that is based on the instantaneous voltage & current multiplications. (Ref signal connection is required)
Running hours (On-time)	OTRDR	This is a count of the time during which the SSR output is ON. On switch ON, this register reports the recorded value at the last switch OFF.
Active Energy	ENRDLR, ENRDHR	This reports the energy reading in kWh. On switch ON, this register reports the recorded value at the last switch OFF. (Ref signal connection is required)

Note 1: For further information please refer to the 'NRG user manual'.

Note 2: Ref signal connection is recommended with loads less than 1A

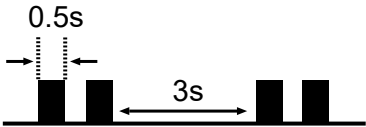

**LED indicators**

<b>LOAD</b>	Green 	The Load LED reflects the status of the load depending on the presence of the control signal. During an over-temperature condition, the LOAD LED will behave according to the indications in the table "LOAD LED indications in over-temperature condition" below	
<b>BUS</b>	Yellow 	ON:	During a response from the RG..N to the NRG controller
		OFF:	Communication between the NRG controller and RG..Ns is idle or during the transmission of a command from the NRG controller to the RG..N
<b>ALARM</b>	Red 	ON:	Fully ON or flashing when alarm condition is present. Refer to Alarm Management section
		OFF:	No alarm condition

**LOAD LED indications in over-temperature condition**

Control signal A1, A2	RG..N supply (through internal bus by RCRGN..)	Over-temperature condition	LOAD LED green 
ON	OFF	Detection not possible without BUS connected	ON
ON	ON	OFF	ON
ON	ON	ON	OFF
OFF	OFF	Detection not possible without BUS connected	OFF
OFF	ON	ON	OFF
OFF	ON	OFF	OFF

Alarm management

<p><b>Alarm condition present</b></p>	<ul style="list-style-type: none"> <li>• The state of the Red LED of the respective RG..N is ON with a specific flashing rate</li> <li>• Alarm flag (<b>AL1SF</b>), Comms error flag (<b>CMERF</b>) or internal error flag (<b>INERF</b>) in the RG..N status register (<b>EDGSR</b>) is set</li> <li>• Any of the flags in the Alarm 1 status register (<b>AL1SR</b>) of the respective RG..N is set</li> </ul> <p>Please refer to the NRG User Manual for further information</p>

**Short circuit protection**

**Protection Co-ordination, Type 1 vs Type 2:**

Type 1 protection implies that after a short circuit, the device under test will no longer be in a functioning state. In Type 2 co-ordination the device under test will still be functional after the short circuit. In both cases, however the short circuit has to be interrupted. The fuse between enclosure and supply shall not open. The door or cover of the enclosure shall not be blown open. There shall be no damage to conductors or terminals and the conductors shall not separate from terminals. there shall be no breakage or cracking of insulating bases to the extent that the integrity of the mounting of live parts is impaired. Discharge of parts or any risk of fire shall not occur.

The product variants listed in the table hereunder are suitable for use on a circuit capable of delivering not more than 100,000A rms Symmetrical Amperes, 600 Volts maximum when protected by fuses. Tests at 100,000A were performed with Class J fuses, fast acting; please refer to the table below for maximum allowed ampere rating of the fuse. Use fuses only.

Tests with Class J fuses are representative of Class CC fuses.

Protection co-ordination Type 1 according to UL 508				
Part No.	Prospective short circuit current [kArms]	Max fuse size [A]	Class	Max. voltage [VAC]
RGS..50, RGC..25	100	30	J or CC	600

Conductors	+24 V, GND, Data, Data, Auto- addressing line

# RCRGN..

## NRG internal BUS cable

### Main features

- Cables available at various lengths to provide the internal BUS of the NRG system
- Cables terminated at both ends with a microUSB plug
- Connects the NRG controller to the RG..N solid state relay and respective RG..N solid state relays

### Description

The **RCRGN** cables are proprietary cables that must be used with the NRG system for the internal BUS. These cables connect the NRG controller to the RG..N solid state relays and respective RG..N solid state relays.

The RCRGN... are 5-way cables carrying the communication, supply and autocofiguration lines. By means of autoconfiguration, the RG..Ns are assigned a unique ID based on the physical location and hence internal BUS wiring sequence when an autoconfiguration command is sent to the RG..Ns.

### Carlo Gavazzi compatible components

Description	Component code	Notes
<b>NRG Controller</b>	NRGC..	<ul style="list-style-type: none"> <li>• <b>NRGC</b>: NRG controller with Modbus communication.</li> <li>• <b>NRGC-PN</b>: NRG controller with PROFINET communication.</li> <li>• <b>NRGC-EIP</b>: NRG controller with EtherNet/IP communication.</li> <li>• <b>NRGC-ECAT</b>: NRG controller with EtherCAT communication.</li> <li>• <b>NRGC-MBTCP</b>: NRG controller with Modbus TCP communication.</li> </ul> 1x RGN-TERMRES is included in the NRGC.. packaging. The RGN-TERMRES is to be mounted on the last RG..N on the bus chain.
<b>Solid state relays</b>	RG..N	NRG solid state relays
